### **HAMMEROFLIGHT**

\_1.4.4.2\_\_

### HAMMEROFLIGHT.MODELCOMPARATOR

### CLF\_COMPARATOR()

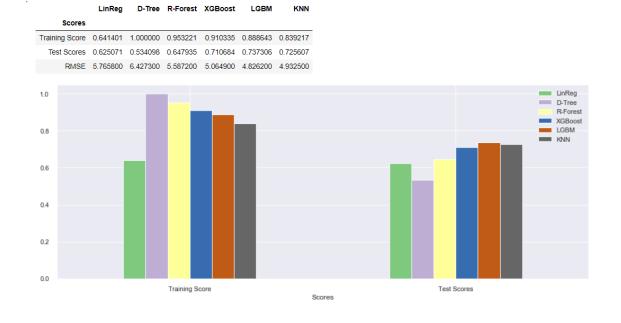

### REG\_COMPARATOR()

: from hammeroflight.modelcomparator import reg\_comparator
from hammeroflight.modelfitter import fit\_regress

: reg\_comparator(X\_train, X\_test, y\_train, y\_test)

[12:00:11] WARNING: C:/Jenkins/workspace/xgboost-win64\_release\_0.90/src/objective/regression\_obj.cu:152: reg:linear is now deprecated in favor of reg:squarederror.

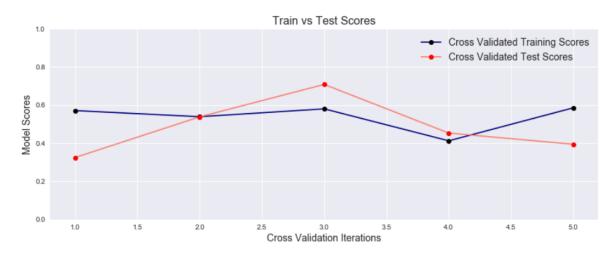

#### **HAMMEROFLIGHT.MODELFITTER**

### RUN\_REGRESSOR()

```
from lightgbm import LGBMRegressor
from sklearn.linear_model import LinearRegression
lr = LinearRegression()
lg = LGBMRegressor(learning_rate=0.01)
run_regressor(lr, X_train, X_test, y_train, y_test, 5)
```

Predictions stored in global variable "pred".

	Score
CV Training Score	53.7573
CV Test Score	48.3721
RMSE	6.23072
MAE	4.5521
MAPE %	22.7647
Fit	Over-Fitted

Function displays user-settable CV Training and Test scores, and plots it.

RMSE,

MAE,

MAPE

and Goodness of Fit.

If Target Variable has 0 in values, MAPE will show 'inf'. This is because MAPE is prone to division by zero.

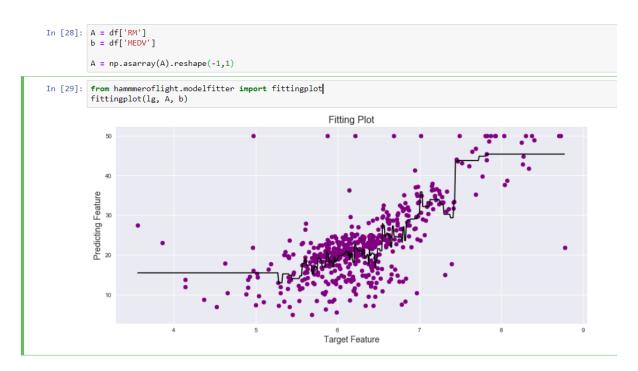

### RUN\_CLASSIFIER()

```
In [22]: from hammeroflight.modelfitter import run_classifier
    from sklearn.ensemble import RandomForestClassifier
            rf = RandomForestClassifier(n_estimators=20)
            run_classifier(rf, X_train, X_test, y_train, y_test, 10)
            Predictions stored in global variable "pred".
Out[22]:
                                 Score
            CV Training Score 89.5842
                CV Test Score 89.4153
                    Precision 0.868108
                       Recall 0.894638
                    F1-Score 0.249601
                          Fit Good Fit
                                                                       Train vs Test Scores
                1.0
               0.8
            Model Scores
                0.6
                0.4
                      - Cross Validated Training Scores

    Cross Validated Test Scores

                                                                      Cross Validation Iterations
```

### FITTINGPLOT()

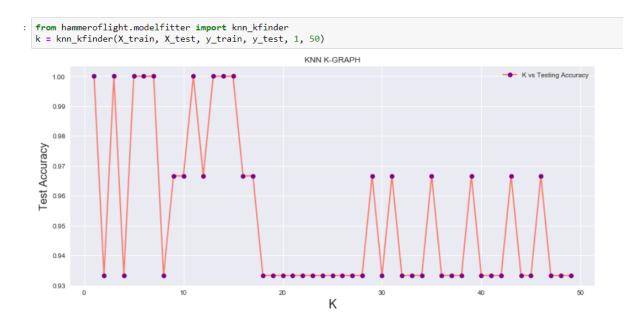

### KMEANS\_KFINDER()

K value seems best at 2 - 4. We will test clustering for all three values.

Elbow Plot to determine best value of K in KMeans Clustering (Unsupervised Learning)

### KNN\_KFINDER()

Graph to display best Values of K. In this case, K is best between 13 and 17 as further down the test accuracy fluctuates below 0.97.

### QUALITYREPORT()

Best used as from hammeroflight.arufunctions import qualityreport as qr

from hammeroflight.	modelfi	itter <b>impo</b>	rt fit_cla	assify, fi	ittingplot	, featuresele	ector

### **HAMMEROFLIGHT**

1.4.4.2

**With Dummy set to true:** All the remaining unencoded variables are transformed to One Hot Encoded, drop\_first=True.

### IMPUTE\_ENCODE ( dummy=True)

#### **OTHER USEFUL FUNCTIONS:**

- 1. featureselector() Correlation based Feature Selector for ML algorithms
- 2. arima\_ordertuner() p, d, q values for ARIMA forecasting model hypertuning.
- 3. plot forecast() Forecast plotting of Truth and Predicted Values
- 4. cleanandencode() Similar to Impute\_Encode except no imputation of NaNs.
