1.7.3

INSTRUCTIONS FOR INSTALLATION FOR FIRST TIME:

Any one of the following methods can be chosen. The most preferred way is direct installation from the Jupyter Notebook. (Note that the '!` must be used before pip without spaces as shown.)

- 1. In command prompt: pip install hammeroflight
- 2. In Jupyter Notebook: !pip install hammeroflight
- 3. In Anaconda Powershell prompt: pip install hammeroflight

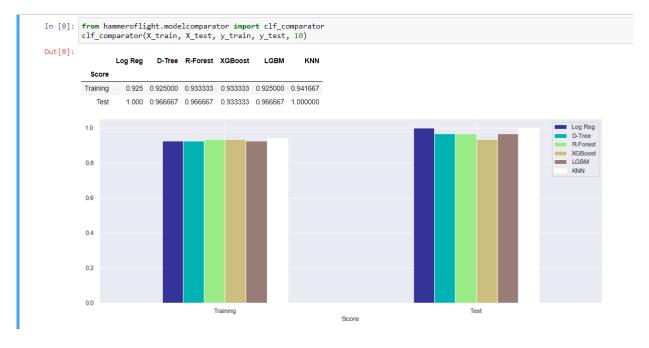

INSTRUCTIONS FOR INSTALLING AND UPGRADE:

- 1. In command prompt: pip install hammeroflight==x.x.x (Version Number)
- 2. In Jupyter Notebook: !pip install hammeroflight == x.x.x
- 3. In Anaconda Powershell prompt: pip install hammeroflight==x.x.x
- **The latest Version Number is written in the Header Section, or can be found in the README.txt
- ** Follow Github to know version number.

DEMO OF SOME AVAILABLE FUNCTIONS:

HAMMEROFLIGHT.MODELCOMPARATOR

CLF_COMPARATOR()

__1.7.3___

HAMMEROFLIGHT.MODELCOMPARATOR

REG_COMPARATOR()

Scores

: from hammeroflight.modelcomparator import reg_comparator
from hammeroflight.modelfitter import fit_regress

: reg_comparator(X_train, X_test, y_train, y_test)

LinReg D-Tree R-Forest XGBoost LGBM

Training Score

[12:00:11] WARNING: C:/Jenkins/workspace/xgboost-win64_release_0.90/src/objective/regression_obj.cu:152: reg:linear is now deprecated in favor of reg:squarederror.

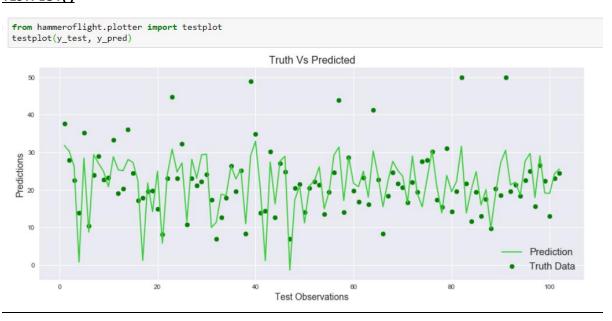

KNN

HAMMEROFLIGHT.PLOTTER

TESTPLOT()

0.0

Test Scores

__1.7.3___

HAMMEROFLIGHT.MODELFITTER

RUN_REGRESSOR()

```
from lightgbm import LGBMRegressor
from sklearn.linear_model import LinearRegression
lr = LinearRegression()
lg = LGBMRegressor(learning_rate=0.01)
run_regressor(lr, X_train, X_test, y_train, y_test, 5)
```

Predictions stored in global variable "pred".

	Score
CV Training Score	53.7573
CV Test Score	48.3721
RMSE	6.23072
MAE	4.5521
MAPE %	22.7647
Fi+	Over Fitted

_1.7.3__

HAMMEROFLIGHT.MODELFITTER

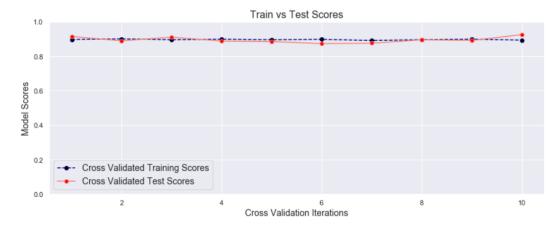

RUN_CLASSIFIER()

In [22]: from hammeroflight.modelfitter import run_classifier
 from sklearn.ensemble import RandomForestClassifier
 rf = RandomForestClassifier(n_estimators=20)
 run_classifier(rf, X_train, X_test, y_train, y_test, 10)

Predictions stored in global variable "pred".

Out[22]:

	Score
CV Training Score	89.5842
CV Test Score	89.4153
Precision	0.868108
Recall	0.894638
F1-Score	0.249601
Fit	Good Fit

__1.7.3___

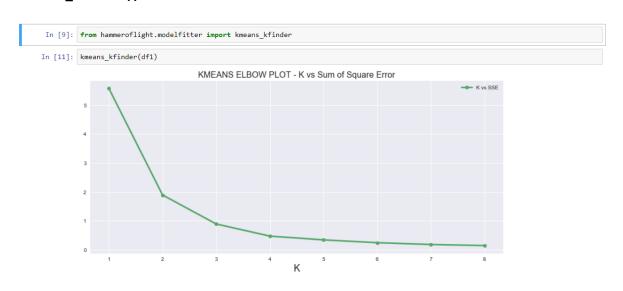

HAMMEROFLIGHT.PLOTTER

FITTINGPLOT()

HAMMEROFLIGHT.MODELFITTER

KMEANS_KFINDER()

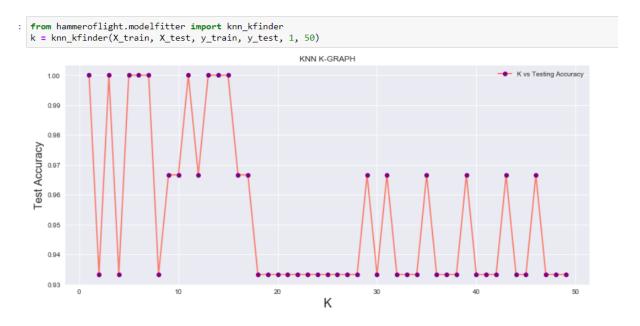

K value seems best at 2 - 4. We will test clustering for all three values.

Elbow Plot to determine best value of K in KMeans Clustering (Unsupervised Learning)

__1.7.3__

HAMMEROFLIGHT.MODELFITTER

KNN_KFINDER()

Graph to display best Values of K. In this case, K is best between 13 and 17 as further down the test accuracy fluctuates below 0.97.

_1.7.3__

HAMMEROFLIGHT.ARUFUNCTIONS

Missing Values imputed by mean/mode

_1.7.3__

With Dummy set to true: All the remaining unencoded variables are transformed to One Hot Encoded, drop_first=True.

IMPUTE_ENCODE (dummy=True)

OTHER USEFUL FUNCTIONS:

- 1. featureselector() Correlation based Feature Selector for ML algorithms
- 2. arima_ordertuner() p, d, q values for ARIMA forecasting model hypertuning.
- 3. plot forecast() Forecast plotting of Truth and Predicted Values
- 4. cleanandencode() Similar to Impute_Encode except no imputation of NaNs.
